LHC Crab Cavities, CM12

R. Calaga, April 10, 2009
Ack: LHC-CC Team

- Status & documentation

- Technical $\overset{?}{\leftrightarrow}$ Political Challenge

- Crab planning & LARP role

FY08-09

- 7 Webex, 3 LARP-CM Sessions

- LHC-CC08 & CERN WS Summary

- CARE-HHH report (Dec 2008)

- PAC09

  - 1 Oral Contribution, >10 Posters

- LHC-CC09 summary report & Pre-TDR

Papers & Presentations

Papers

* LHC Crab Cavities: In the proceedings of the final CARE-HHH workshop, Chavannes-de-Bogis, Nov 200
* Crab Cavity Ramping Studies, presented at the LCU Meeting Oct 2009, A. Morita (Part I, Part II)
* LHC Crab Cavity Validation Report: Summary of the LHC-CC validation workshop, CERN, Aug 2008
* LHC-CC08 Summary Report: Summary of the 1st crab cavity workshop, BNL, Feb 2008
* Small Angle Crab Crossing for the LHC: Proceedings of the IR07 Workshop, Frascati, Nov 2007 (R. Cala
* Crab Cavity Option for LHC IR Upgrade: Proceedings of the LHC-LUMI-06 Workshop, Valencia, Oct 200
* Progress of beam-beam compensation schemes: Proceedings of the LHC-LUMI-05 Workshop, Arcidoss

Presentations

* 7th Webex Meeting: February 24, 2009 (Meeting Minutes)
  - Status, Tunnel Constraints & Future Deadlines - R. Calaga
  - Cavity/Coupler Progress:
    - ▪ L. Xiao (SLAC Progress), G. Burt (UK Progress)
    - ▪ L. Xiao (SLAC Alternative Design Results)
  - Multipacting Analysis for KEK-B Structure - N. Solyak

* 6th Webex Meeting: December 9, 2008 (Meeting Minutes)
  - Cavity Down Selection & Merit Sheets - R. Calaga
  - Cavity/Coupler Progress:
    - ▪ Y. Morita (Cavity, KEK-B Experiments), Z. Li (SLAC Progress), G. Burt (UK Progress)
  - Cryostat & LHC Tunnel - Y. Yakovlev
  - Discussions:
    Down Selection, Merit Sheet & improvements, Coupler based tuning. Multipacting & Thermal/Mecha

* 5th Webex Meeting: September 25, 2008 (Meeting Minutes)
  - Warm model fabrication and testing (J. Shi, Tsinghua University)
  - CERN Workshop Summary & FY09 Tasks/Budgets (R. Calaga, BNL)
  - Possible KEK-B Contribution to LHC-CC (Y. Morita, KEK)
  - Cavity/Coupler Progress: L. Xiao SLAC, G. Burt LU/DI/CL
  - Cryostat Progress (N. Solyak, FNAL)
  - KEK-B Compact Design (N. Kota, KEK)

tWiki Repository

LHC Crab Cavities

A small angle (~0.5mrad) crab scheme at the LHC is foreseen as one of the most effective tools for upgrade. Crab cavities recover the geometric luminosity loss from the finite crossing angle which ste nominal value. The crab compensation is anticipated to be accomplished in two phases:

- Phase I: A global scheme with cavities placed far from the IP (IR4 region) with the right phase
- Phase II: A local scheme near the IP and consequently the closed orbit outside the IR region i

RF Design & Requirements: Cavity, Couplers & Components
Optics with Crab Cavities: Global & Local
Collimation & Aperture
Tracking Studies Synchro-Betatron Resonances, DA, etc..
Integration into the LHC
Workshops, Meetings & Minutes

FAQ
Next CC Meeting (LARP Meeting, CM12)

Date: Thursday, April 9, 2009
Time: 1:30-5:30 pm (Pacific Daylight Time: GMT -07:00, San Francisco)
For Meeting Details: Click Here

-- R. Calaga - 1 Apr 2008
- Complete design(s) & Simulations

- Actively share information & analysis

- Documentation, schedule & procedures

KEK-B Experiments for LHC

Artificial modulated noise (inside and outside betatron spectrum)

HER Ring

KEKB measured crab dispersive orbit
1st measurement of crab-dispersion

R. Tomas et al., PRST-AB to be submitted

Perspective & Challenges

- Oct 2006:   IR upgrade overload   – Consolidation (crabs survive)

- Nov 2007:   CARE-HHH, IR07   – Crabs were focus

- Feb 2008:   LHC-CC08   – Established road-map for crabs

- Aug 2008:   CERN workshop   – Crab "Validation"

- Oct 2008:   LARP, CM11   – Can we fund crabs ?

- Jan 2009:   LARP-CERN meeting   – Does CERN want it ?

- Sep 2009:   LHC-CC09   – Will there be a prototype ?

Why do prototype test

- Present phase II upgrade options

    - D0, LPA, CC, LE

- One cavity/beam @IR4, proof of principle & most cost effective

- Understand the operational limitations

- Vital experience in technology, fabrication, integration (future machines)

- Luminosity leveling (enough to justify crabs)

- Other benefits from crab cavities

    - Momentum dependent "ac dipole" for collimation (S. Fartoukh)

- Wide spread synergy & interest

Installation Scenarios

- **Easy**: Installation in the capture cavity region

- **Moderately Easy**: Extend the IR4 Dog-Leg

- **Moderately Difficult**: Dog-Leg elsewhere in the ring (E. Jensen)

- **Difficult**: IR1/IR5 Region

IR4 Dog-leg

How to proceed ?

LHC-CC09, Sept 16-18

- 3rd Crab Cavity Workshop to take place @CERN

- Workshop format:
    - Advisory Board (10), Program Committee (18)
    - 2 day workshop – similar format as LHC-CC08
    - 0.5 day review by, session convenors report to AB

- AB recommedation for future R&D + summary report

- Preliminary technical report to outline cryomodule & test details

AB: I. Ben-Zvi, S. Chattopadhyay, G. Hoffstaetter, E. Jensen, S. Myers (Chair), M. Nessi, T. Raubenheimer, E. Tsesmelis, J. Virdee, A. Yamamoto

PC & Program: Invitations underway

5-6 yr Proposal

6.6		Tunnel Preparation										
6.7		Installation/Alignment										
6.8		RF Powering										

FY10 Focus

- RF design of the cavity-couplers near completion

- Engineering file-formats available for the cavity designs
  - RF parameters, impedances... feed into simulations

  - Multipacting analysis (already excellent progress)

  - Mechanical/thermal analysis (to follow)

- Cryostat design needs significant ramp-up

- RF controls needs a crab specific design/testing

- <u>Cost estimate</u> of infrastructure, cryogenics, safety systems etc...

Prelim OP Scenarios & Tests

- Cavity-coupler conditioning
- Injection/Ramp (detuned/dephased & "zero" voltage)
  - First turn, capture efficiency, emittance growth
- Top energy
  - Cavity re-phasing/re-tuning
  - Cavity ramping (9-90 ms)
  - Crab-β squeeze
- Beam Studies (single $\rightarrow$ multiple, 50ns $\rightarrow$ 25ns)
  - Emittance growth, closed orbit, RF phasing, feedback, filling scheme
  - Sp. luminosity gain & leveling, collimation optimization

Lumi Gain

Crab Voltage 2.5-5.5 MV

$\{E, {}^{max}\beta_{crab}\}$	3 TeV, 1 km	5 TeV, 2 km	7 TeV, 3 km
$\beta^* = 25$ cm	Reduce Emittance Increase X-Angle Artificial Enhancement		56%
$\beta^* = 30$ cm			40%
$\beta^* = 55$ cm			10%

Failure Scenarios

Before prototype tests:

- Fabrication, cryostat
- Cavity-coupler performance, compliance

Beyond prototype tests:

- Cavity phasing-tuning limits and non-adiabatic ramping
- Cavity trips & power supply problems
- Vacuum degradation
- Cavity and component quench
- RF loops & feedback $\rightarrow$ instabilities
- Alt: two cavity system vs. damp/dephase/detune
- Misc

Conclusions

- Continue R&D towards LHC-CC09/10 (~700k/yr, $<$ 1FTE/lab)

  - "TDR": cryomodule, integration, OP procedures, simulations

  - Collimation simulations show similar results as nominal LHC (Impact Par discussions)

- KEK-B experiments to vital for LHC specific issues

  - Same luminosity as before with 30% less current (β-beat fixed)

  - Crab-dispersion, noise, OP scenarios

- Beyond FY10: Assist in prototype, parallel R&D on compact structures

- Boost "LARP" students (and postdocs) on specific tasks

- Positive outcome of LHC-CC09/10 $\rightarrow$ Move towards "Crabbed-APL"?
Cryostat Development
Cryostat design advancing well, need very detailed design of cavity, each coupler with dimensions, helium vessel, etc...

Multipacting

SLAC

Tech-X/UK

FNAL/KEK

Kick=1.8 MV Yield_max=1.5

Kick=2.05 MV Yield_max=1.5

Kick=2.25 MV Yield_max=1.5

Kick=2.5 MV Yield_max=1.5
Excellent progress on multipacting and cures to overcome. Continue the effort towards LHC-CC09.

Warm Models, FY10-11

- 2-cell cavity model (more than one design ?)

- Coupler Model(s)

- Mock-up Cryostat ?

- Engineering design and fabrication

    - Sort all possible difficulties (by LHC-CC11)

    - Benchmark RF simulations

    - SBIRs if approved are well timed for this effort, LARP support

- Test program for warm model measurements
